Part 1: Group plan

Team members:

Kin Seet, Han Yin

Revised project description:

Today, we can use internet to search what we decide what to eat. For example, Yelp is quite
popular for us. We can use Yelp to find the best restaurant around us. Although, Yelp has got
every detail we might need. But, since there are too many options for some users, they have to
enter what type of restaurant, what kind of food, etc. Who is going to spend time on these?
Wouldn't it be nice if we can find restaurant with voice control, like (Siri, Alexa or Ok Google)?
When the users enter the app, the app will answer any question that is relevant to what they
search for such as, the users' feelings, location, how hungry they are. The app will store those
information and do the calculation then return results to the users in efficient way, and this won't
take too long to process. So the users don't have to spend time to stare at their tablets and
struggling what they want to eat. This app is perfect for people who has difficulty making
decisions, and makes their life easier.

Meeting schedule:

Sunday 12-2pm, and random meeting after the lecture depend on project process

Group chat and documentation:

Google Docs, text message, slack, snapchat.

Part 2: Research plan

Our Survey Questionnaire:

1. What is your name_____?

2. How old are you___?

   A 0-14 B 15-21 C 21-30 D 31-45 E above 45

3. What is your job _____ ?

4. What is your favorite food _____?

   A Mexican food B French food C American food D Chinese food E Indian food F other
